

Course Overview

- Healthcare environments are extremely challenging for designers who want to fulfill the need for maximum durability, cleanability, and safety without sacrificing the needs for a warm and inviting setting for patients to feel calm and heal quickly
- Too often in the past sterility has won out. But today, a melding of the safest products and the highest aesthetic value can be achieved within a healthcare facility
- This is thanks to ever-more sophisticated surface products that perform to the highest standards and are color and pattern coordinated within a manufacturer's portfolio
- This course demonstrates that marriage between form and function
